

IronOrbit Wraps a Successful Week Exhibiting at the Gartner® IT Infrastructure, Operations & Cloud Strategies Conference in Las Vegas

Friday, December 19th, 2025 - Las Vegas, NV - IronOrbit announced the successful completion of its exhibition at the 2025 Gartner® IT Infrastructure, Operations & Cloud Strategies (IOCS) Conference in Las Vegas. This event brought together thousands of IT leaders shaping the future of cloud, VDI, and digital workspace strategy.

This year's conference delivered powerful insights, with sessions reinforcing that the future of cloud remains strong and increasingly focused on performance, agility, governance, and security. Throughout the event, IronOrbit engaged IT executives, industry leaders, and infrastructure management teams from across the country, eager to discuss the evolving challenges in their VDI and DaaS environments.

A recurring theme among IT leaders was a lack of capabilities in large public cloud platforms. Many noted that features, functionality, flexibility, workload optimization, and predictable costs are increasingly difficult to achieve with hyperscalers. As a result, organizations are now actively exploring private cloud alternatives that offer greater control, enhanced functionality, and improved operational agility.

IronOrbit stood out as the only DaaS vendor recognized in this year's Gartner® Magic Quadrant™ for Desktop as a Service to exhibit at the event, an honor the company has held for the last three consecutive years. This visibility, coupled with analyst acknowledgment during key sessions, reinforced IronOrbit's position in the secure, high-performance DaaS and private cloud market.

*"We had incredibly productive conversations with IT leaders who are rethinking their cloud strategies and seeking more customizable, high-performance environments," said **Kamron Naderkhani, Head of Marketing**. "This year's Gartner® IOCS event confirmed that organizations are looking beyond public cloud providers and toward specialized private cloud platforms like IronOrbit that deliver greater agility, stronger security, and dependable performance for VDI and DaaS workloads."*

IronOrbit will continue expanding its private cloud capabilities and enhancing its INFINITY Workspaces platform to support the next generation of AI-ready, compliance-driven, and performance-sensitive workloads.

About IronOrbit

IronOrbit is a specialized cloud service provider delivering secure, high-performance private cloud and DaaS solutions. With a newly expanded Hawaii cloud node, a Microsoft GCC partnership, and selection as the IT partner for a Forbes-recognized multibillion-dollar bank, IronOrbit continues to be a trusted provider of scalable, compliant, and future-ready cloud infrastructure.
