

# SACA TECHNOLOGIES COMPLETES SOC 2 TYPE 2 AUDIT CERTIFICATION

**February 1, 2021 — Anaheim Hills, CA** — a comprehensive provider of Managed IT service, IT support, virtualization, and cloud services for businesses, SACA Technologies, Inc. announced the completion of SOC 2 Type 2 audit based on the trust services criteria relevant to Security and Availability.

Unlike Type 1, which only looks at a point in time, Type 2 is rigorous because it shows compliance to controls over an extended period of time. The meticulous review spanned the period from October 1, 2019, through September 30, 2020.

Conducted by an AICPA certified independent party Cyber Guard, the audit affirms that SACA Technologies' information security practices, policies, procedures, and operations have met and exceeded the industry-leading standard for both the Security and Availability Trust Service Criteria.

*"Having a comprehensive cybersecurity system in place is vital for all businesses today,"* said Alexander Saca, CEO of SACA Technologies. *"We are committed to providing our clients with top-level security and availability."*

*"SACA Technologies has demonstrated a high-caliber of devotion to their business through the application of a robust set of internal controls solidifying the security and continuity of critical customer operations,"* says Jim Jimenez, a Managing Partner at CyberGuard Compliance, LLP. *"The successful completion of this audit is a clear statement of client commitment."*

Saca Technology's cloud division, IronOrbit, provides INFINITY Workspaces to create robust, reliable, and user-centric digital remote work environments. INFINITY Workspaces are optimized by IronOrbit's proprietary SMX Speed Technology™ to deliver superior performance and enable companies to run business-critical workloads and resource-intensive applications securely and seamlessly. These powerful cloud workspaces provide latency-free, high-speed rendering capabilities, reliable 24/7 access, and real-time collaboration across project teams.
