Press Release

IronOrbit Exhibits at New York's Largest Construction & Design Conference

GPU-Accelerated INFINITY Workspaces to Pave the Way for the AEC Industry.

Monday, February 28th, 2022 - Anaheim Hills, CA - IronOrbit, ICT powerhouse and Gartner recognized Managed DaaS provider, announces it will be exhibiting at the New York Build 2022 Expo. The in-person conference, the largest of its kind on the East Coast, will be at the recently expanded Javits Center, March 2 & 3, 2022. Information and Education sessions will be available online.

The two-day construction industry conference will feature over 250 exhibitors and 300 speakers presenting on topics including Aligning Technology & Business, Importance of Digitization, and New York's $306 Billion Infrastructure Plan. The construction industry has traditionally been technologically conservative, but the current business climate is urging all sectors to engage cloud technologies.

"New York is the nation's most active construction site. They have the highest construction employment levels, even before the passing of the infrastructure bill," says VP of Business Unit, Ayman Ayoub. *"The bill's passing means many AEC firms will have to scale quickly to meet the demands of new projects, and our INFINITY Workspaces are an ideal fit. Firms realize significant benefits, including real-time collaboration, improved productivity, and centralized data within a secure environment. We're here to collaborate and share insights with the industry because we understand how important new technology is for sustained success."*

As AEC firms seek long-term solutions that align technology with business strategy, they realize the need for cloud solutions that offer comprehensive digital transformation. IronOrbit's proprietary turnkey solution, managed DaaS, fits the bill. Graphics-intensive 3D applications drive the AEC industry, and the GPU-Accelerated INFINITY Workspaces are optimized for engineers and architects needing real-time collaboration and superior performance. Visitors at the IronOrbit exhibit will be able to see first-hand demonstrations of crucial benefits such as:

- **Fast and seamless performance of CAD power users**
- **Collaboration-ready workspaces in action**
- **Real-time and instant scaling of resources**
- **IT management from a single dashboard**

IronOrbit's INFINITY Workspaces focus on significant GPU use cases for both knowledge workers and creative design professionals requiring graphic-intensive 3D applications.

The New York Build Expo, the National Council of Structural Engineers Association recognizes the valuable contributions structural engineers make to building safe structures and making communities more resilient. The organization works to constantly improve the standard level of practice of the structural engineering profession.

IronOrbit is scheduled to exhibit at many AEC conferences in 2022, including multiple National Council of Structural Engineers Association (NCSEA) events. A recent talk on VDI was presented to the Massachusetts chapter of the ACEC, as well as Five-Ways to Future-Proof Your Firm at the 2021 National ACEC Conference. The company also hosts the AEC technology forum, "What's Up AEC?!", where they review and discuss trending topics impacting the AEC industry. IronOrbit provides cloud services and highly secure cloud workspaces to thousands of customers, including the US government. They are SOC 2 Certified and have multiple Tier 3 & 4 data centers located in North America and Canada. Learn more at www.ironorbit.com
