

## IronOrbit Connects with AEC Leaders at AIA 2025, Sparks Key Conversations on Cloud Performance and Data Protection

**Tuesday, June 17th, 2025 – Anaheim, CA – IronOrbit, a Gartner-recognized provider of GPU-accelerated cloud desktops for the AEC industry, proudly concluded its participation in the AIA 2025 Conference & Expo in Boston. The event provided an exciting opportunity to engage with architecture, engineering, and construction professionals from across the country.**

“We had in-depth conversations around supporting graphics-intensive applications, securing project data, and managing IT across distributed teams, challenges that are top of mind for today’s AEC firms” said Ziad Itani, Head of Sales Engineering at IronOrbit.

Cloud performance, data protection, and cost predictability were top concerns in our conversations with AEC professionals at the event. Many attendees expressed frustration with public cloud providers, particularly around the lack of transparency, rising usage-based costs, and the fact that essential services like backup and support are often not included. In contrast, IronOrbit offers a predictable monthly fee that includes everything AEC firms need to run efficiently and securely. Leaders were especially interested in how we support graphics-intensive applications like Revit, Lumion, and Enscape without compromising performance. They also valued our secure, compliant infrastructure and 3-2-1 backup strategy, which eliminates single points of failure and replicates data across multiple geographically redundant sites to ensure business continuity.

### Checking in with Boston-Based Clients

In addition to meeting new firms, the IronOrbit team reconnected with its expanding base of AEC clients in the Boston area, many of whom manage multiple offices and support hundreds of employees nationwide. These firms rely on IronOrbit’s INFINITY Workspaces to enable secure, efficient workflows. Built for the AEC industry, our solutions support a cloud-first strategy with a fortified, secure, and compliant infrastructure. Our multi-cloud management platform, IOCentral, provides IT leaders with full visibility and control over their infrastructures.

### About IronOrbit

IronOrbit is a leading provider of fully managed, secure, and GPU-accelerated cloud desktops purpose-built for the AEC industry. With a focus on performance, compliance, and business continuity, IronOrbit helps architecture, engineering, and construction firms work smarter, from anywhere.
